# RIVER FLOOD DEFENCE

September 2000,  
Herkules Verlag Kassel  
ISBN No. 3-930150-20-4

Size: 15x21cm, 3 pieces  
1418 pages  
178 tables  
631 black-and-white figures  
15 color figures

Among the natural catastrophes, flood events are world-wide of outstanding importance, representing 32 % of the damaging events, 31 % of the economic damage and 55 % of the casualties (1986-1995). The origins, effects and control of flood events are described by 130 international authors in the three-part book "River Flood Defence".

The book includes the sections History of Flood Protection, Hydrologic Data and Precipitation, Precipitation-Runoff models, Pollutants and Pathogens in flood, Flood Risks, New Developments in Flood Protection, INTERREG II C Rhine Maas Activities (IRMA), Worldwide Projects of the World Exhibition in Hanover (EXPO), and posters and reports on the conference and field trips.

The book provides a description of the status of the research and the technology, it gives hints for new developments and research requirements, and it shows examples of planning and practice. The contributions and discussion results of the Workshops "Pollutants and Pathogens in flood" are emphasised, as well as the description and evaluation of the IRMA and EXPO projects.

River Flood Defence is equally suitable for teaching and research, as well as for water resources management practice in administrations, federations and consulting companies.
